INSTRUCTION OF WINDOW 11 INSTALL

1.Open a Command Prompt (Run as Administrator) and use the following commands

.path of the your machine =cd "C:\Program Files\Oracle\VirtualBox"
.VBoxManage.exe modifyvm "<Your VM Name>" --tpmdev "tpm0"
.VBoxManage.exe modifyvm "<Your VM Name>" --tpm-type "2.0"

2.**Enable TPM and Secure Boot in VirtualBox:**

- Open VirtualBox and select the virtual machine you created for Windows 11
- Click **Settings** > **System** > **Motherboard**:

    1.Enable **EFI (Special OSes only)** to emulate Secure Boot.

- Go to **Settings** > **System** > **Processor**:

    2.Ensure at least 2 CPU cores are allocated.

- Navigate to **Settings** > **System** > **Acceleration**:

    3.Enable **VT-x/AMD-V** or other hardware virtualization options
